SUMMARY

Full Stack Software Engineer experienced in building scalable web applications using the MERN stack, TypeScript, and AWS. Skilled in developing responsive React/Next.js frontends, secure Node.js backend services, RESTful APIs, real-time systems with WebSockets, and AI-powered features, with hands-on experience in Redis caching, authentication, and cloud deployment. Strong focus on performance, security, scalability, and clean architecture.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, C, C++

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Redux, Context API, Vite, Responsive Design

Backend: Node.js, Express.js, Fastify, RESTful APIs, API Gateway & Reverse Proxy, WebSockets, Socket.io, Undici, JWT Authentication, API Key Authentication, OAuth 2.0, Passport.js

Databases & Caching: MongoDB (Mongoose), MySQL, Redis, Redis Pub/Sub, Redis Lua Scripting, Elasticsearch, Distributed Caching

Cloud & DevOps: AWS (Lambda, API Gateway, EC2), Docker, Docker Compose, Nginx, Vercel, Render

AI & Integrations: Gemini API, Groq API, Hugging Face API, RAG, LLM Integration, Prompt Engineering

Testing & Observability: Jest, Vitest, K6, Postman, Swagger, Load/Stress/Soak Testing, E2E Testing, Performance Benchmarking, Structured Logging

Core Concepts: Data Structures & Algorithms, OOPs, DBMS, Operating Systems, System Design, Distributed Systems, REST API Design, API Gateway Architecture, Reverse Proxying, Asynchronous Processing, Event-Driven Architecture, Rate Limiting, Caching, Circuit Breakers, Connection Pooling, Streaming & Backpressure, Resilience Engineering, Git, GitHub, NPM, solved **300+** LeetCode Problems

EXPERIENCE

Full Stack Developer Intern — Asvix (Remote)

June 2026 – Present

- Built AI-powered Chat and Deep Research features for an educational platform, improving learning support for IGNOU and UNESCO learners.
- Engineered secure backend APIs with request validation and quota management to ensure reliable, consistent data handling.
- Optimized application performance through API enhancements, debugging, and testing, improving feature stability.

MERN Stack Intern — Genesis (Remote)

Feb 2026 – May 2026

- Built and enhanced full-stack MERN applications with RESTful API integration to strengthen core product features.
- Implemented backend authentication flows and database operations alongside responsive frontend components to improve user experience.
- Collaborated on debugging, API testing, and deployment following Agile practices to ship features reliably.

PROJECTS

Pulse — Distributed Real-Time Messaging Infrastructure | GitHub, Live Demo, NPM

Aug 2026 – Sept 2026

Technologies: Node.js, TypeScript, WebSockets (ws), Redis, Redis Pub/Sub, JWT, Jest, React, Vite, Render

- Built a production-oriented distributed real-time messaging infrastructure using Node.js, TypeScript, and native WebSockets, supporting room-based messaging, delivery acknowledgements, JWT authentication, heartbeats, and connection lifecycle management.
- Implemented Redis Pub/Sub with lease-based distributed presence, rate limiting, connection admission control, dead-connection detection, and backpressure handling to improve reliability across real-time workloads.
- Built a Mission Control dashboard for real-time observability across connections, rooms, throughput, event-loop latency, Redis, and presence; integrated RouteX, a TypeScript API Gateway and reverse proxy with JWT/API-key auth and rate limiting, directly into Pulse for HTTP/WebSocket routing without an extra network hop.
- Validated the system across 1,000 concurrent WebSocket connections, high-volume messaging, real Redis workloads, soak and security/chaos testing, and graceful shutdown scenarios; published @ankit18193/pulse v0.4.0 and deployed the stack on Render.

IntelliGate — AI-Powered Self-Optimizing API Gateway | GitHub, Live Demo

Apr 2026

Technologies: TypeScript, Next.js, AWS Lambda, API Gateway, MongoDB, Redis, BullMQ, JWT, K6, Swagger, Groq API, Hugging Face API, Gemini API

- Architected a serverless AI-powered API Gateway with a reusable TypeScript SDK, enabling strongly typed client integration, secure authentication, caching, and rate limiting.
- Designed an AI-driven optimization system with multi-provider fallback across Groq, Hugging Face, and Gemini APIs to ensure reliable request processing.
- Implemented BullMQ-based asynchronous processing and observability tracking, validated through K6 load testing for scalable, high-traffic operations.

Smart Recruit AI — End-to-End ATS & Hiring Platform | GitHub, Live Demo

Mar 2026 – Apr 2026

Technologies: React.js, Node.js, Express.js, MongoDB, Redis, Elasticsearch, Docker, AWS EC2, BullMQ

- Built 30+ RESTful APIs using Node.js, Express.js, MongoDB, and Redis to manage candidate workflows and recruitment operations.
- Optimized candidate search and filtering performance using Elasticsearch, Redis caching, and BullMQ-based asynchronous job processing.
- Implemented AI-powered resume screening, JWT authentication, and RBAC security, deploying the platform via Docker on AWS EC2.

EDUCATION

Bachelor of Engineering in Computer Science and Engineering — RR Institute of Technology, Bangalore

Dec 2022 – May 2026

CGPA: 8.5/10
